Relevant Experience - 5 YOE

Site Reliability Engineer/Developer (IC2) - Oracle America

Oct 2024 - Present

Embedded SRE on the Oracle Kubernetes Engine (OKE) team, responsible for the reliability, availability, and scalability of Kubernetes across all OCI regions and realms globally.

- Develop an automated internal system for discovering, indexing, and terminating cloud resources in developer spaces. Implementation resulted in cost reduction of almost 40% annually.
- Develop automated security triage tooling to reduce manual toil across the SRE team in ingesting, assigning, and tracking security efforts on a finding by finding basis.
- Drive deployment orchestration and region buildout/expansion operations for OKE, coordinating multi-team rollouts that maintain zero-downtime SLAs across production tenancies.
- Contribute to platform resiliency improvements by identifying gaps in observability and alerting coverage, ensuring high availability targets are consistently met.
- Participate in on-call rotations to swiftly diagnose and resolve production incidents across our global product.

DevOps Engineer - INADEV

Dec 2022 - Sept 2024

DevOps Engineer on U.S. government contracts (USCIS), building and maintaining cloud-native infrastructure and CI/CD systems under Public Trust clearance.

- Designed, deployed, and maintained production Kubernetes clusters on AWS EKS, supporting containerized application workloads with high availability and security compliance requirements.
- Built and owned end-to-end CI/CD pipelines using Jenkins, Git, and Docker. Automated build, test, and deployment stages and reduced deployment cycle time significantly.
- On-Call rotations handling production issues across government-facing systems, contributing to stakeholder trust.

Full Stack Dev/DevOps Intern - INADEV

Jun 2022 - Dec 2022

- Developed a Python-based deduplication engine using numpy and recordlinkage, later adopted across multiple government coding challenges and continued to see production use.
- Completed intensive DevOps onboarding in Terraform, AWS, Docker, and Kubernetes, earning a full-time engineering offer within 6 months.

Projects

Homelab/Server Machine - Personal

Ongoing

- Design and maintain a personal homelab running a suite of self-hosted services for family/friend use, exposed securely over the internet via a reverse proxy, authentication, and Cloudflare edge protection on a personally owned domain.
- Ongoing R&D environment for expanding skills in DevSecOps, Platform Engineering, and self-hosted tooling.

CordPal - Full-Stack Web Application - Personal

Currently Live

A self-hosted, production-deployed web platform integrating with Discord, built and maintained end-to-end as a solo project. Source available at github.com/Choheron/CordPal.

- Designed and built a full-stack application with a TypeScript/Next.js frontend and Python backend, integrated with the Discord API.
- Own the full development lifecycle: containerized via Docker, routed through homelab nginx reverse proxy, protected with Authelia SSO and Cloudflare, and monitored proactively in production.

Technical Skills

Cloud & Platforms: OCI (Full Suite), AWS (EKS, EC2, S3, RDS, CloudWatch, SQS, Shield), Rancher

Container & Orchestration: Kubernetes, Docker, Helm, Podman

CI/CD & Automation: Jenkins, Git, Terraform, Shell Scripting

Languages: Python, Javascript, Go, React, NextJS, Groovy, Java

Observability: Logging, Monitoring, Alerting, Incident Response, Cost Management

Other: Agentic Workflows, Linux Administration, Solutions Architecture, Networking, Nginx, Authelia

Education

George Mason University - Fairfax, VA

Fall 2018 - Spring 2023

B.S. Applied Computer Science concentrated in Game Design - Minor: Software Engineering

Certifications

- AWS Solutions Architect - Associate
- OCI 2025 Certified Architect Associate
- OCI 2025 Certified Generative AI Professional
